# NATIONAL SHEEP HEALTH DECLARATION - EXPLANATORY NOTES

## Overview

Completing this National Sheep Health Declaration (NSHD) will assist prospective buyers to make an informed decision about the health status and management history of these sheep. The NSHD is mandatory for all sheep movements in SA and for sheep being moved into NSW and Tasmania. It is voluntary in other states.

## Livestock Production Assurance (1)

Livestock Production Assurance (LPA) program accreditation means that a property must have a biosecurity plan for the property. The National Farm Biosecurity Reference Manual for Grazing Livestock Production can be used to develop plans or further information including templates is available at: [www.animalhealthaustralia.com.au/what-we-do/endemic-disease/farm-biosecurity-plan](http://www.animalhealthaustralia.com.au/what-we-do/endemic-disease/farm-biosecurity-plan)

## Footrot (3 and 4)

3. Virulent footrot is defined differently in each state. For information on this and interstate movements of sheep, producers should visit the relevant state department website or contact animal health staff from that department.
4. If answered Yes, all mobs should have been checked during at least one spread period, and any lameness investigated, with no symptoms of the disease observed. If answered no, producers can add any information about the disease and their management of it, e.g. whether any testing has been carried out, or what treatments may have been used recently.

## Lice (5)

All mobs should be checked for lice at least twice each year. Any sheep seen with rubbed fleece or pulled wool should be checked for lice as a matter of urgency. Further information is available at: [www.paraboss.com.au](http://www.paraboss.com.au)

## Approved Vaccinate (7)

- A sheep that is identified by an NLLS (sheep) 'V' tag and is:
- vaccinated with an approved JD vaccine by 16 weeks of age. OR
  - vaccinated with an approved JD vaccine after 16 weeks of age, when the flock:
    - was in the SheepMAP, or
    - had undertaken a negative Faecal 350 test in the two (2) years preceding the vaccination, or
    - had a Negative Abattoir 500 status at the time of vaccination.

## SheepMAP (8)

An audited quality assurance program incorporating a property biosecurity plan, animal health risk assessment, testing, and movement controls that provide a source of low risk animals. Note - the level of testing varies depending on the status. Date of last test should be recorded in Q9.

## Types of tests that may be recorded (9)

**Faecal 350:** A test of 350 representative sheep over 2 years of age (or all sheep over 2 years of age in smaller flocks) by Pooled Faecal Culture (PFC) or High Throughput Johne's (HT-J) PCR in pools of up to 50 sheep. The sheep must have been on the property for at least 2 years.

**Abattoir 500:** At least 500 sheep, over 2 years of age, have been submitted to an abattoir in the past 24 months, in 1 or more lots, have been examined and all found negative for JD. The sheep must have been on the property for at least 2 years.

**Abattoir 150:** At least 150 sheep, over 2 years of age, have been submitted to an abattoir in the past 12 months, in 1 or more lots, have been examined and all found negative for JD. The sheep must have been on the property for at least 2 years.

## JD management practices (10)

Any other management practices carried out for JD could be recorded here: e.g. types of introductions to the flock, or veterinary investigations.

## Other relevant health information (11)

Any other information that a producer thinks may be relevant can be recorded here: e.g. participation in an active grower group, One Biosecurity, or other biosecurity initiatives, mulesing status, pain relief usage, etc.

## Declaration

Signing this declaration has legal significance under fair trading and other relevant state legislation. Regulatory authorities may also take legal action, and purchasers may seek damages for any information that is incorrect. Before signing you must be satisfied you understand all elements of the document, and these explanatory notes.

# NATIONAL CATTLE HEALTH DECLARATION EXPLANATORY NOTES

## OVERVIEW

**The Cattle Health Declaration is a legal document. Please complete accurately before signing.**

Cattle Health Declarations are a way for producers to provide information about the health status of the cattle they are selling. Buyers should ask vendors for a Declaration and use the information provided to determine the health risks associated with the animals on offer.

Some states/territories require testing or certification additional to that outlined in this document e.g. Johne's disease (JD) in WA and for Enzootic Bovine Leucosis (EBL) in Tasmania. Please check the entry requirements for any interstate movements at:

[www.animalhealthaustralia.com.au/what-we-do/endemic-disease/livestock-movements](http://www.animalhealthaustralia.com.au/what-we-do/endemic-disease/livestock-movements)

The original of this form is to be attached to the National Vendor Declaration (NVD) form accompanying the cattle, if applicable. A duplicate remains with the vendor; it is recommended the vendor retains a copy of this declaration for seven (7) years.

## QUESTIONS 3 & 4: BOVINE VIRAL DIARRHOEA VIRUS (PESTIVIRUS) TESTING

Persistently infected animals can be detected by conducting a pestivirus antigen test. This test only needs to be conducted once in an animal's life. Cattle that test positive in most cases are persistently infected animals. Pestivirus antibody testing may be done to check the pestivirus status of the herd. Dairy cattle may be tested through bulk milk testing. Contact your veterinarian for assistance. Producers who don't know the answer to these questions should tick the 'N' box.

## QUESTION 5: JOHNE'S DISEASE TESTING

**Note: JD is a notifiable disease, so it is important to answer these questions.**

**Check test** – testing of 50 adult animals in the herd (or all eligible animals in a herd if less than 50 adult animals) biased to increase the probability of detecting infection, tested by (pooled) faecal culture or (pooled) HT-J faecal PCR. An ELISA test is available but is not recommended and also not accepted for entry of cattle to WA.

**Sample test** – screening of the adult herd or a large representative sample of the adult herd by an approved test (pooled) faecal culture or (pooled) HT-J faecal PCR. See note above for ELISA test.

**Herd Environmental Culture (HEC) Check Test** (for dairy cattle) – a test of a representative sample of faecal material from the yard (see JD in [Cattle Definitions & Guidelines](#) for details). Details are available at [www.animalhealthaustralia.com.au/jd-cattle-tools](http://www.animalhealthaustralia.com.au/jd-cattle-tools).

## QUESTIONS 6 & 7: JOHNE'S DISEASE

Occurrence of JD refers to clinical disease in the herd or on the property(s). Clinical disease is an infected animal with chronic diarrhoea and weight-loss that does not respond to treatment.

The **Johne's Beef Assurance Score** (J-BAS) is a voluntary tool developed for JD risk profiling. Details are available at [www.animalhealthaustralia.com.au/jd-cattle-tools](http://www.animalhealthaustralia.com.au/jd-cattle-tools). The J-BAS is an initial guide and purchasers should ask for more information about JD in the origin herd (see the JD in Cattle Biosecurity Checklist on the 'JD in cattle' webpage). The *National Farm Biosecurity Reference Manual - Grazing Livestock Production* provides a template to use for the property biosecurity plan. All plans should include the JD in Cattle Biosecurity Plan Checklist.

The **Johne's Disease Dairy Score** (JDDS) is a voluntary tool for JD risk profiling in dairy cattle. Information is available at [www.dairyaustralia.com.au/bjd](http://www.dairyaustralia.com.au/bjd)

**Grazing of non-bovine species** – Buyers of cattle from this consignment may consider the grazing of other JD-susceptible species (sheep, goats, alpacas) on the source property as important to their risk-management decisions. These buyers are entitled to seek information on how you have managed disease risks for all your livestock.

## TREATMENTS & VACCINATIONS

Provide details on any cattle treatments in the last six (6) months and vaccinations within the last twelve (12) months.

Some manufacturers include more than one of the categories listed in the same vaccine, known as a combination vaccine. If you use a combination vaccine, each agent(s), as appropriate, should be detailed.

For vaccinations to be current, you must have followed the manufacturer's recommendation for vaccination. Typically, young animals or first time vaccinated animals need two (2) doses, followed by annual boosters. As variations to this general rule do occur (e.g. Silirum is given once only), you must use the manufacturer's recommendations.

At the date the declaration is made and as a result of the vaccination(s) given, the animals are considered protected from the diseases marked as treated.

## DECLARATION

This section must only be completed by the owner or person responsible for the husbandry of the cattle in the consignment.

For more information on what is fit to travel, please see MLA's *Is it fit to load?* at [www.mla.com.au/isitfittooad](http://www.mla.com.au/isitfittooad).

The microchip number is really important – it does not matter whether the horse is EA registered with a different name – so long as the description and microchip number match. - further competitor information can be found the website.
